

## Department of Energy

Pt. 850

from a production or utilization facility or device and such contamination is characterized by levels of radiation in excess of one of the values listed in column 1 or column 2 of the following table, or

(2) Surface contamination of any offsite property has occurred as the result of a release of radioactive material in the course of transportation and such contamination is characterized by levels of radiation in excess of one of the values listed in column 2 of the following table:

TOTAL SURFACE CONTAMINATION LEVELS<sup>1</sup>

Type of emitter	Column 1—Offsite property <sup>2</sup>	Column 2—Other offsite property
Alpha emission from transuranic isotopes.	3.5 microcuries per square meter.	0.35 microcuries per square meter.
Alpha emission from isotopes other than transuranic isotopes.	35 microcuries per square meter.	3.5 microcuries per square meter.
Beta or gamma emission.	40 millirads/hour 1 cm (measured through not more than 7 milligrams per square centimeter of total absorber).	4 millirads/hour 1 cm (measured through not more than 7 milligrams per square centimeter of total absorber).

<sup>1</sup>The maximum levels (above background), observed or projected, 8 or more hours after initial deposition.

<sup>2</sup>Contiguous to site, owned or leased by person with whom an indemnity agreement is executed.

[49 FR 21473, May 21, 1984; 49 FR 24374, June 13, 1984]

### §840.5 Criterion II—Substantial damages to persons offsite or property offsite.

(a) After DOE has determined that an event has satisfied Criterion I, DOE will determine that the event has resulted or will probably result in substantial damages to persons offsite or property offsite if any of the following findings are made:

(1) DOE finds that such event has resulted in the death or hospitalization, within 30 days of the event, of five or more people located offsite showing objective clinical evidence of physical injury from exposure to the radioactive, toxic, explosive, or other hazardous properties of source, special nuclear, or byproduct material; or

(2) DOE finds that \$2,500,000 or more of damage offsite has been or will probably be sustained by any one person, or

\$5 million or more of such damage in the aggregate has been or will probably be sustained, as the result of such event; or

(3) DOE finds that \$5,000 or more of damage offsite has been or will probably be sustained by each of 50 or more persons, provided that \$1 million or more of such damage in the aggregate has been or will probably be sustained, as the result of such event.

(b) As used in paragraphs (a) (2) and (3) of this section “damage” shall be that arising out of or resulting from the radioactive, toxic, explosive, or other hazardous properties of source, special nuclear, or byproduct material, and shall be based upon estimates of one or more of the following:

(1) Total cost necessary to put affected property back into use.

(2) Loss of use of affected property.

(3) Value of affected property where not practical to restore to use.

(4) Financial loss resulting from protective actions appropriate to reduce or avoid exposure to radiation or to radioactive materials.

## PART 850—CHRONIC BERYLLIUM DISEASE PREVENTION PROGRAM

### Subpart A—General Provisions

Sec.

850.1 Scope.

850.2 Applicability.

850.3 Definitions.

850.4 Enforcement.

850.5 Dispute resolution.

### Subpart B—Administrative Requirements

850.10 Development and approval of the CBDPP.

850.11 General CBDPP requirements.

850.12 Implementation.

850.13 Compliance.

### Subpart C—Specific Program Requirements

850.20 Baseline beryllium inventory.

850.21 Hazard assessment.

850.22 Permissible exposure limit.

850.23 Action level.

850.24 Exposure monitoring.

850.25 Exposure reduction and minimization.

850.26 Regulated areas.

850.27 Hygiene facilities and practices.

850.28 Respiratory protection.

850.29 Protective clothing and equipment.
